DETAILED ACTION

REASONS FOR ALLOWANCE

1. After further search and thorough examination of the present application claims 1-22 are found to be in condition for allowance over the prior art of record.
2. The following is an Examiner's statement of reasons for allowance: the claimed invention relates to a driving circuit having the function of applying a reverse-bias voltage to an organic electroluminescent element that controls degradation of the organic electroluminescent element.

To achieve the inventive goal, independent claims 1, 2, 9, 11, 12, 19, identify the distinct features "a duration for writing to each pixel and the duration for setting the organic electroluminescent element for each pixel to the reverse-bias state are separately set."

In addition, claims 21 and 22 identify the features "while the organic electroluminescent elements in one line of pixels are set to the reverse-bias state, the organic electroluminescent elements in another line of pixels are not set to the reverse-bias state and writing to the lines of pixels are carry out".

The first cited reference Okuda (U.S. Pat. No. 6,380,689) discloses a driving method for an active matrix type luminescent panel, in which a reverse bias voltage can be applied to each EL device. The second cited reference Kono et al. (U.S. Pat. No. 6,191,764) disclose a method of driving display device.

Art Unit: 2675

However, none of the cited references, either singularly or in combination, teach or fairly suggest a device comprising the specific limitations as described in the independent claims above.

These limitations, in conjunction with all other limitations of the base claims were not shown by, would not have been obvious over, would have been fairly suggested by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
